

MINOR, INTERDISCIPLINARY ENVIRONMENTAL CHANGE

Minor

The minor in interdisciplinary environmental change provides students with an integrative understanding of the causes, impacts, and potential mitigation of anthropogenic environmental change by combining relevant knowledge, perspectives, and critical thinking skills from across the natural sciences, engineering, social sciences, humanities, and Alaska Native studies. This minor is intentionally interdisciplinary, reflective of the multidimensionality of the social-ecological issue of environmental change. It is flexible to allow students to pursue their individual lines of interest within this broad field. UAF is a world leader in environmental change and Arctic research due in part to its location, where the impacts of climate change can be observed and felt at an accelerated pace, and is an ideal setting in which to engage with faculty possessing expertise in multiple dimensions of environmental change, through in-person and/or online coursework.

2 Minor, Interdisciplinary Environmental Change

¹ Students can choose from a list of pre-approved courses that span UAF's disciplinary strengths in environmental change. Students are also encouraged to explore other relevant courses, such as special topics courses, classes bringing in cross-cultural perspectives, research experiences, and study away programs. Any course that is not on the pre-approved list must be approved by the undergraduate interdisciplinary advisor for it to meet this minor's requirements.

As with all minors, courses should not be already counted toward baccalaureate core requirements, although GER courses can count toward both. Students should work with their advisor to examine their major requirements and select courses accordingly.
