CONSTRUCTION MANAGEMENT

A.A.S. Degree

The construction management program meets growing needs in the
construction industry by training entry-level construction managers and
by providing continuing education for construction employees.

Construction managers plan, direct and are responsible for oversight
of construction projects. They are responsible for coordinating and
managing people, materials and equipment; budgets, schedules
and contracts; and the safety of employees and the general public.
Construction managers determine construction means and methods and
the most cost-effective plans and schedules. They track construction
costs and administer contract changes to the project budget to
maximize profitability. Construction managers monitor work progress
to ensure compliance with architectural and engineering drawings and
specifications.

Construction managers work in all phases of the construction business
— public and private owners; from small, multifamily projects to
large skyscrapers and industrial projects; and from rural roads to
major highways. Construction managers work closely with architects,
engineers, owners and the various contractors on a construction job. The
construction manager’s duties are varied, challenging and rewarding.

UAF’s construction management program was developed with input
from local contractors and professional industry organizations. It
gives students broad knowledge of building systems and construction
techniques. Construction management graduates understand basic
principles of business and know about the technical aspects of the
construction industry. Graduates are able to function both in the
construction office and on the job site.

The construction management A.A.S. degree requires four to five
semesters to complete. While not a prerequisite, it is recommended that
students applying for admission have experience in the construction
industry.

Minimum Requirements for Construction Management
Associate’s Degree: 62 credits
